

## INTRODUCING THE PROREACT J CLIP

Provides 50%+ quicker installation time, and safer working from height when compared to the L Clip...

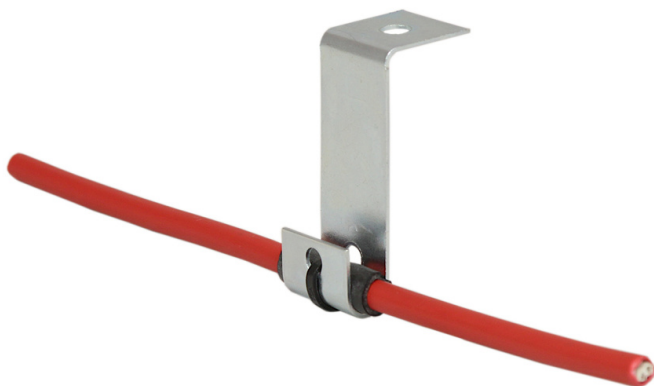

Thermocable's ProReact accessories can provide a greater guarantee to the overall performance of our linear heat detection systems. Continually aiming to maximise efficiency and provide the best solutions for our clients, we are adding the 'J clip' as our preferred accessory. Complying with the latest requirements of BS 5839, this provides end user peace of mind and assurance in design.

### **Stainless Steel as Standard**

Reducing the need for replacement, the J clips won't rust, and will be unaffected by damp/harsh weather.

### **Higher Quality. Lower Cost.**

When compared to stainless steel L clips, J clips are cheaper, more time effective AND of higher resilience.

### **50% Decrease in Installation Time. Safe Working From Height.**

With the lower bend of the 'J' acting as a ready-made support for our LHD cable, this enables the early stages of cable installation to be by-passed, and allows the installer to maintain an additional point of contact with their ladder/lift. Creating quicker install times, and reduced resource requirements, it has **never been easier or safer to protect your buildings and people from fire.**
